- Punctuality. Responsibility. Good performance and willingness to work in a team. Flexible schedule. Quick learning.
- CSS3. HTML5. JavaScript. ReactJS. NodeJs. ExpressJs. MongoDB. Mongoose. MySQL. Typescript. Material UI. Bootstrap. Git y GitHub. SASS. TailwindCSS.

Proyectos

RESTful API Social Network

The project involves developing a RESTful API using NodeJS, MongoDB, Mongoose, and JWT. It includes user registration and login features with authentication. Users have different roles and can be searched, listed, and followed by others. They can also create posts, edit their own profiles and profile images, and update their personal information. At the moment I'm working on chat feature.

MediaHub

I developed an application using ReactJS and MUI that allows users to watch videos using the YouTube API. The application allows users to search for videos and channels, and when entering a channel, it displays the channel's profile, including the number of subscribers and videos. When a user selects a video, the player displays it, also it shows the number of likes and views, along with a list of recommended videos.

RESTful API Blog

I developed a RESTful API using NodeJS, MongoDB, and Mongoose for a blog that allows users to upload, edit, delete, and list articles. It also includes a search function that finds and displays articles containing matches for the entered keywords. Additionally, users can attach images to their articles.

ECommerce SPA

The project involves developing an ECommerce (SPA) using React, React Router, MaterialUI, and Firebase. It allows users to add and remove products to/from a shopping cart, which is saved in both localStorage and the Firebase database. Products contain images and stock management features. During checkout, users can choose from multiple payment methods, fill out a data validation form, and receive a receipt for their purchase.
